

Load SimpleDateFormat from Spring Configuration XML

Code:

date-format.xml

```
<?xml version="1.0" encoding="UTF-8"?>

<beans xmlns="http://www.springframework.org/schema/beans"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="
    http://www.springframework.org/schema/beans
    https://www.springframework.org/schema/beans/spring-beans.xsd">

  <bean id="dateFormat" class="java.text.SimpleDateFormat">

    <constructor-arg value="dd/MM/yyyy"/>

  </bean>

</beans>
```

SpringLearnApplication.java

```
package com.cognizant.spring_learn;

import java.text.SimpleDateFormat;
import java.util.Date;

import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;
import org.springframework.context.ApplicationContext;
import org.springframework.context.support.ClassPathXmlApplicationContext;

@SpringBootApplication
public class SpringLearnApplication {

    public static void main(String[] args) {

        SpringApplication.run(SpringLearnApplication.class, args);

        displayDate();

    }

    public static void displayDate() {
```

```

ApplicationContext context =
    new ClassPathXmlApplicationContext("date-format.xml");

SimpleDateFormat format =
    context.getBean("dateFormat", SimpleDateFormat.class);

try {

    Date date = format.parse("31/12/2018");

    System.out.println("Parsed Date : " + date);

} catch (Exception e) {

    e.printStackTrace();

}

}

```

Output:

The screenshot displays the Eclipse IDE interface. The top part shows the source code of `SpringLearnApplication.java`, which is a Spring Boot application. The code imports necessary classes and defines a `main` method that calls `SpringApplication.run` and `displayDate`. The bottom part of the screenshot shows the console output, which includes the standard Spring Boot startup logs, such as the application name, version, and the time taken to start. The final output line is `Parsed Date : Mon Dec 31 00:00:00 IST 2018`.
