

Creating Spring Project using Spring Initializr:

The screenshot shows the Spring Initializr web application. The interface is dark-themed and includes a sidebar with navigation icons. The main content area is divided into several sections:

- Project:** Radio buttons for **Gradle - Groovy**, **Gradle - Kotlin**, and **Maven** (selected).
- Language:** Radio buttons for **Java** (selected), **Kotlin**, and **Groovy**.
- Spring Boot:** Radio buttons for **4.1.1 (SNAPSHOT)**, **4.1.0** (selected), **4.0.8 (SNAPSHOT)**, and **4.0.7**.
- Project Metadata:** Text input fields for **Group** (com.cognizant), **Artifact** (spring-learn), and **Package name** (com.cognizant.spring-learn). Below these are radio buttons for **Packaging** (**Jar** selected, War) and **Configuration** (**Properties** selected, YAML). At the bottom of this section are radio buttons for **Java** version (**26**, **25**, **21**, **17** selected).
- Dependencies:** A section with a button **ADD DEPENDENCIES... CTRL + B**. It lists **Spring Boot DevTools** (with a **DEVELOPER TOOLS** tag) and **Spring Web** (with a **WEB** tag), each with a brief description.

At the bottom of the interface are three buttons: **GENERATE CTRL + G**, **EXPLORE CTRL + SPACE**, and an ellipsis button.

Importing Spring Project using Spring Tool Suite:

Code:

Default SpringLearnApplication.java Code:

```
package com.cognizant.spring_learn;

import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;

@SpringBootApplication
public class SpringLearnApplication {

    public static void main(String[] args) {
        SpringApplication.run(SpringLearnApplication.class, args);
    }

}
```

Modified SpringLearnApplication.java Code:

```
package com.cognizant.spring_learn;

import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;

@SpringBootApplication
public class SpringLearnApplication {

    public static void main(String[] args) {

        System.out.println("Spring Learn Application Started");

        SpringApplication.run(SpringLearnApplication.class, args);

        System.out.println("Spring Learn Application Running Successfully");

    }

}
```

[illegible]

White label Error - Spring Boot application is running properly , Proper URL not mapped.
