

Task Name: React Event Handlers

Code:

App.jsx

```
import EventExamples from "../EventExamples";
import CurrencyConvertor from "../CurrencyConvertor";
import "../App.css";

function App() {
  return (
    <>
      <h1>React Event Handling Examples</h1>

      <EventExamples />

      <hr />

      <CurrencyConvertor />
    </>
  );
}

export default App;
```

CurrencyConverter.jsx

```
import { useState } from "react";

function CurrencyConvertor() {
  const [rupees, setRupees] = useState("");
  const [euro, setEuro] = useState("");

  const handleSubmit = () => {
    const conversionRate = 100;

    const convertedValue =
      Number(rupees) / conversionRate;

    setEuro(convertedValue.toFixed(2));
  };
}
```

```

return (
  <div>
    <h2>Currency Convertor</h2>

    <label>
      Enter Amount in Rupees :
    </label>

    <br />

    <input
      type="number"
      value={rupees}
      onChange={(e) =>
        setRupees(e.target.value)
      }
    />

    <br />
    <br />

    <button onClick={handleSubmit}>
      Convert
    </button>

    <br />
    <br />

    {euro && (
      <h3>
        Euro Value : €{euro}
      </h3>
    )}
  </div>
);
}

export default CurrencyConvertor;

```

EventExamples.jsx

```

import { useState } from "react";

```

```
function EventExamples() {
  const [count, setCount] = useState(0);

  // Increment Method
  const increment = () => {
    setCount(count + 1);
  };

  // Decrement Method
  const decrement = () => {
    setCount(count - 1);
  };

  // Static Message
  const sayHello = () => {
    alert("Hello! Have a nice day.");
  };

  // Multiple Methods
  const handleIncrement = () => {
    increment();
    sayHello();
  };

  // Welcome Message
  const sayWelcome = (message) => {
    alert(message);
  };

  // Synthetic Event Example
  const handleSyntheticEvent = () => {
    alert("I was clicked");
  };

  return (
    <div>
      <h2>Counter Example</h2>

      <h3>Counter Value : {count}</h3>

      <button onClick={handleIncrement}>
        Increment
      </button>

      <button onClick={decrement}>
```

```
        Decrement
      </button>

      <br />
      <br />

      <button
        onClick={() =>
          sayWelcome("Welcome to React Event Handling!")
        }
      >
        Say Welcome
      </button>

      <br />
      <br />

      <button onClick={handleSyntheticEvent}>
        OnPress
      </button>
    </div>
  );
}

export default EventExamples;
```

Output:
